

1. You have been provided markup in labCSS-test03.html. You cannot modify the markup, so this will require working with selectors. The markup includes links to two Google Fonts.

This exercise focuses on text and character styles. The final result should look similar to that shown in Figure below:

Enlarged view :

1. For the `<h1>` elements, use a font-weight of 500, letter-spacing of 5px, a color of deeppink and center align the text.
2. To complete the `` circles, set the border-radius to 50%, the font-size to 12px, and transform the content to upper case via the text-transform property.
3. Each colored circle `` has its own class name (e.g., color1, color2). Define these classes and set the background-color to be the same as the span label.
4. Define the details class. It should have a font-size of 16px, be silver and italic.
5. Define each of the elements (h2, h3, h4) and classes (bodytext and asidetext). The style definitions for font, size, weight, and line height are contained in the markup itself.

Paste the screenshot of the changes(only the changes) you made to the file below.

Instruction for submission:

Submit the html and css file.
